About me

- Recent graduate with a Full Stack Developer Certificate, looking to leverage my experience building responsive and scaleable web apps to solve interesting problems that delight end-users.
- I am titled of a National Engineer in chemical engineering processes, graduated from the National Engineering School of Gabès, one of the great engineering schools of Tunisia.
- I master the following technologies: JavaScript (React / Redux), HTML5 / CSS3, Node.js, interactions with a REST API.
- I work in the Agile method, in coordination with the other Research and Development sites.
- Autonomous and pedagogue, I support the team in place in its skills development.
- My technical curiosity pushes me to develop personal projects.
- I like working in a team, I want to progress and improve my skills.

Work experience

Since January 2022

Web Development Instructor
Go My Code Béja, Tunisia

- My job as an instructor is to make the experience socially and humanly positive and more interactive.
- My role is to inspire, motivate and set the best example for students.
- Supervise and train students in the field of digitalization and modern technologies of web development (Javascript, React js, Node js).
- Apply teaching skills and manage a team of more than five people.
- Time management and the ability to screen out mundane tasks and prioritise important ones.
- Navigate and communicate with others in difficlut situations.
- Well handling work pressure.

From June 2021 to July 2021

Internship: Development of a web application
GMC Béja, Tunisia

- Develop a web application (MongoDB, express.js, React.js and node.js) for accommodation and reservation for travelers named Wanderlust.
- Developing front end website architecture.
- Allow users to create their own profiles with all the informations.
- Designing user interactions on web pages.
- Designing and developing APIs.
- Work in collaboration with the team and share tasks and ideas.
